

ELM COMPUTER TECHNOLOGIES LIMITED

Ahead of the Curve

Hong Kong boasts some of the most efficient systems of enterprise and governance in the world, partially due to the development and implementation of the company's intelligent technologies.

Founded in 1990, ELM Computer Technologies Limited (ELM) started business as an electronic HR solutions provider for the Hong Kong market.

The company serves public sector customers and select private sector enterprises in Hong Kong, aiming to increase their competitive advantage by providing end-to-end infrastructure, integrated systems, cloud enablement, reliable applications, system support and maintenance, strategic consultancy and skill transfers.

Having confronted the Asian financial crisis in 1997, the Dotcom crash of 2000, the outbreak of SARS in 2003 and the financial tsunami of 2008, ELM continued to be one of the leading IT solutions providers for the HKSAR Government, sticking to its principle of keeping a culture of creativity and innovation.

Adapt and Develop

ELM has been an IBM Premier Business Partner for over 20 years. A leading eBusiness solutions provider in Hong Kong, ELM has formed strategic partnerships with major technology vendors around the world. Through efficient use of information technology, the company has established an impressive record of accomplishment in delivering systems integration and integrated solutions that allow corporate clients to meet their specific needs. For this reason, the HKSAR Government has contracted the company to administer midrange server, disk storage and tape systems, software solutions, maintenance, support and other related services for more than 15 years.

To cultivate an innovative culture, ELM is structured to operate in a world of change. Retaining openness to upcoming changes allows much room for the growth and fostering of new ideas. The company puts great effort to promote

Kevin Hu, General Manager of ELM Computer Technologies Limited.

creativity in all internal and external processes, leading to the launch of many new IT solution offerings to address the shifting needs of the market.

ELM boasts numerous areas of expertise, including application performance management, access and identity management, enterprise facilities asset and mobile management, enterprise services portal solutions, IT services management, platform virtualization and provisioning, infrastructure and application performance management, and the automation of system operations. These allow customers to streamline operations with strengthened capabilities and improved

efficiency.

With the emergence of opportunities in cloud computing, business analytics, the Internet of things, mobility and social networking, ELM increasingly equips its professional technical team's effectiveness in optimizing multiple aspects of its customers' businesses. As future technologies come into play, the deft and dynamic ELM will only empower Hong Kong further. ■
