

WEALTHY GATE ARCHITECTS & ASSOCIATES LIMITED

Efficient and Cost-Effective Environment-Friendly Architecture

DR. DICKIE LAU KAM SING MH talks about the prospects of smart architecture in the future of development in Hong Kong.

Wealthy Gate Architects & Associates Limited was established in 1991 by a group of talented and experienced professionals from different disciplines. The practice strives to excel in quality, aesthetic and sustainability of its design. The company nurtures a diligent and caring environment that encourages innovative ideas and insights. It specializes in architectural design, project management, and academic research.

Dr. Dickie Lau Kam Sing MH, Founder and currently Managing Director at Wealthy Gate, has over 25 years of professional experience in the architectural industry. Under his leadership, the company is dedicated to enhancing knowledge management and developing advanced technology in the project management process. Its professional team consists of registered architects, engineers, planners and chartered surveyors.

Attention to Detail

“Our ultimate goal is to achieve efficient and cost-effective architectural developments for the enjoyment of clients,” says Lau. “The standards in both quality and information management at our company comply with internationally recognized standards. Clients can obtain extremely high transparency and accuracy of project progress.

“During the design and construction stages, we carry out environmental performance assessment in order to improve the quality of our environment.”

Managing Director of Wealthy Gate
Architects & Associates Ltd.**

The quality of a project not only relates to its costs, but how wisely the time and resources are spent on areas that matters most.

Wealthy Gate pays close attention to every design detail to achieve a longer building life cycle and to minimize maintenance cost. It incorporates architectural features such as sunshades and solar

panels, which help improve the interior ecology and energy saving, it selects and employs green and environmentally friendly building materials, controls construction equipment noise, reduces exhaust emissions and handles waste disposal properly. “These measures work collectively and hence will improve the performance of buildings and reduce the impact of construction on the environment.”

Quality First

“Our mission is to provide clients with professional consultation and services,” says Lau. “We always put quality first; the quality of a project not only relates to its costs, but how wisely the time and resources are spent on areas that matters most. Therefore, from our company’s inception and for each project, we have always strived for the most cost-effective and environmentally friendly practices for all our clients.”

Wealthy Gate closely monitors cost and timeliness of all its endeavours, regardless of its scale and size. Dr. Lau and company believe that only sustainable design and green architecture can be of any true benefit for the citizens of Hong Kong. ■
